

INNOVATIVE TIMING SYSTEMS, LLC

Innovative Timing Systems is a premier provider of complete race timing solutions for triathlons, running events, cycling races, duathlons, motocross, and more

The Innovative Solution

In the last 20 years, there has been little innovation or advancement in the field of race timing...that is until now! The Jaguar platform was designed from the ground up to use the latest hardware and software technologies to create a system that provides an innovative breakthrough for timing races.

Unlike traditional systems that use messy wires, mats, or timing chips that have to be collected after the race, Jaguar uses a tiny disposable chip that can be placed on a bib, running shoe, bike helmet, or on a traditional ankle strap. The chip is read by our antennas which can be placed overhead or to the side of your start, split, or finish lines. Since no mats are needed, the system is perfect for cycling, trail runs, triathlons, and more. In addition, the Jaguar platform is more than just a chip timing system, it's a comprehensive solution that includes powerful race management software.

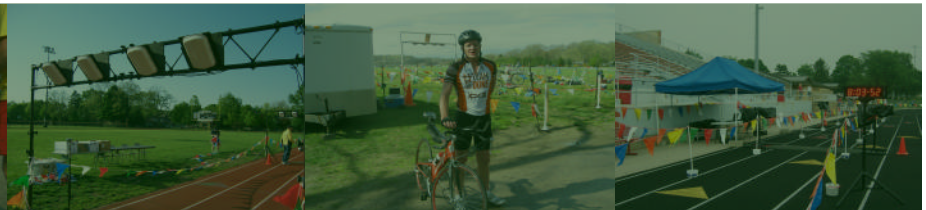

The Innovative Design

The Jaguar platform was designed by world-class athletes, engineers, and race directors. They understand that you need an inexpensive and yet comprehensive solution that can easily handle races as small as 50 or as large as 500,000 participants! Jaguar offers a complete hardware and software solution that includes the following advantages:

- ✓ *Complete solution includes all hardware, software, timing chips, and accessories*
- ✓ *Low-cost disposable timing chips that don't have to be collected after the race*
- ✓ *No messy mats that can cause problems*
- ✓ *Powerful racing software that includes registration, event timing, race reports, etc.*
- ✓ *Race chip that can be placed on a bib, bike, shoe, ankle strap, helmet, etc.*
- ✓ *Real-time reports during the race that can be generated at any time*
- ✓ *Timing chips that can be quickly programmed for customized race bib numbers*
- ✓ *Wireless networking that sends reports and updates to any computer at your race*
- ✓ *Announcer workstation that allows your PA announcer to call out finishers*
- ✓ *Scalable system allows you to start small and add on later for growth*
- ✓ *Fully redundant system that is designed to provide high reliability*

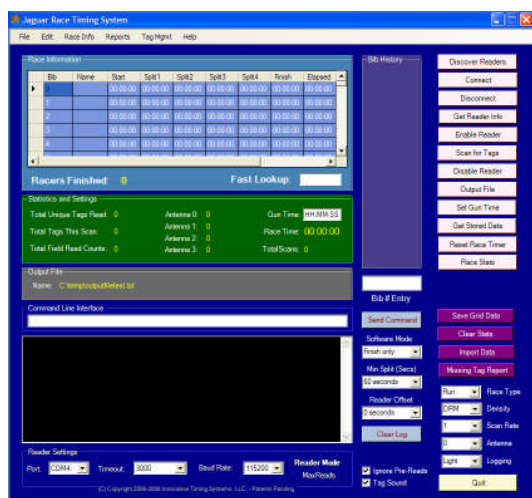

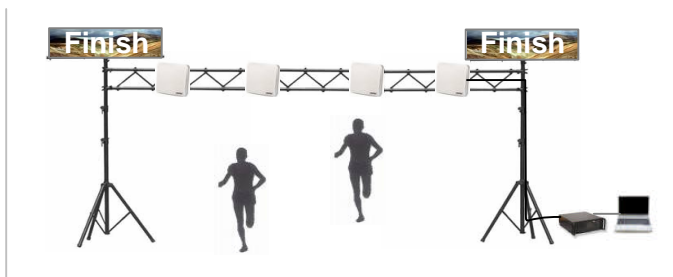

Note: The Jaguar system is constantly evolving and changing, so information in this document is subject to change without notice

Jaguar Hardware

The Jaguar platform includes a timing system case that contains our high speed readers, network interface, computer system, power supply, and backup battery. As shown in the picture to the right, Jaguar comes with antennas and an arch that can be used at your starting line, split points, transition zones, or finish line. The system can also be configured with the antennas on the side of the course in case your race is on an open road. The Jaguar timing case includes a backup power supply that can be configured to provide up to 8 hours of operation without a power source, making it perfect for long races with multiple split points. The system also provides wireless and network support, allowing you to have multiple systems reporting race results to a single consolidated database. Best of all, the system is designed to provide high redundancy. That means you can count on solid race results when timing a large marathon or triathlon with thousands of participants.

Jaguar Software

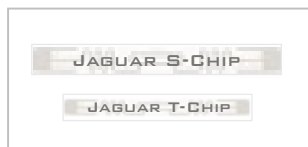

Jaguar is more than just great timing hardware. It's a complete software solution that makes it easy to manage your race. The software includes a database for race registrations, tracks runners throughout the race, allows you to automate the creation of real-time reports during the race, and provides real-time updates to your PA announcer as the race progresses. The software also allows you to quickly customize your race settings to handle any type of race from marathons to triathlons to cycling time trials. In addition, the software can export race results to third-party programs and spreadsheets, making it easy to work with your race information. In short, Jaguar makes it easy to manage every race detail.

Disposable Timing Chips

Perhaps one of the greatest strengths of the Jaguar platform is the low-cost disposable chips. You no longer need volunteers at the end of a race to collect chips, and you don't have to worry about unreturned chips.

In addition, the chips have an adhesive backing that makes it quick and easy to apply to a race bib.

We offer multiple types of chips that can be used for every type of race imaginable. Furthermore, our chips are waterproof and designed to be read at a distance from 1 to 30 feet. No more worries about getting good chip reads and no more hassles trying to get payment for lost chips.

Outstanding Results

When it comes to race timing, you need a system that can deliver outstanding results. We should know, we use the Jaguar platform to time our own races! Our highly redundant design ensures that you'll achieve great success and we've proven that time and time again. Even if a chip is lost during the race, Jaguar is designed to allow you to know it, and it makes it easy to capture the time for that individual. If you lose power at a race, no problem...Jaguar keeps right on working. Need instant race reports delivered every 5 minutes? Jaguar delivers. In short, it provides everything you need to manage your race.
