

# JAGUAR ANTENNA MOUNT

## Adjustable Antenna Mount For ITS Antennas.

The Jaguar™ Adjustable Antenna Mount is made of heavy duty, weather resistant plastic so it can withstand wear and tear. The AMV model allows you to quickly change vertical orientation using two thumb screws. The AMHV model allows you to quickly change vertical and horizontal orientation. Simply push the antenna to turn it 180 degrees, and use a simple pull-pin to adjust the angle of the antenna face. The rotation feature is perfect for out-and-back races where time is of the essence. Mount to many types and sizes of trussing and tripods by using interchangeable grip inserts.

| FEATURES  | AMV  | AMHV |
|---|------|------|
|   | \$59 | \$79 |
| Allows vertical rotation  | √    |      |
| Allows vertical and horizontal rotation with articulating arm                     |      | √    |
| Easily rotate antennas 360 degrees and lock in at 180 degrees                     |      | √    |
| Pre-set antenna angle of 0, 45, 60, and 90 degrees                                |      | √    |
| Heavy duty UV protected plastic is weather resistant                              | √    | √    |
| Quick installation and removal of articulating arm                                |      | √    |
| Attach to multiple types and sizes of trussing using interchangeable grip inserts | √    | √    |
| Safety tested for loads up to 35 pounds   | √    | √    |
| Operates in temperatures from -25F to 145F  | √    | √    |
| 90-day warranty for manufacturing defects   | √    | √    |
| Made in the USA   | √    | √    |
| <b>Accessories</b>  |      |      |
| Grip insert for various trusses and tripods (various sizes available)             | \$10 | \$10 |
| Replacement articulating arm for AMHV mount or to convert AMV to AMHV             | \$35 | \$35 |
