

ITS 7200 ANTENNA

Our Fourth Generation Solution that delivers remarkable performance

The ITS 7200 antenna sets a new standard in performance. It offers a unique design that incorporates 4 internal antennas working together to read the most challenging timing chips. Historically, one of the greatest obstacles to achieving 100% read success at a race, is reading chips that are worn incorrectly, are wet, or may have been damaged by the participant. This new antenna uses a quad-polarized architecture that can find those hard to read chips, resulting in even more races with 100% read success. It's truly a revolutionary design.

\$350.⁰⁰

FEATURES

- Lightweight with a water-proof design for use in light rains to the most brutal downpours.
- Uses a single cable with an N-Type connector for maximum power transmission and reception.
- Supports all Jaguar systems as well as any system that operates from 860 to 930MHz.
- Features a redundant design to ensure continued operation if half of the antenna is destroyed.
- Integrates with all of our mounting systems including permanent or quick release mounts.
- Has a read zone that is optimized to read timing chips in running, cycling, trail, triathlon or MTB races.
- Typical read rate success of up to 600 reads/second with an average read accuracy of 99.9%.
- Weighs under 6 pounds and it's only 1.5 inches deep with a tapered edge to ensure safety.
- Has a plastic cover that is UV resistant, giving it an expected life of 25+ years.
